B.E Project Details :

CONTROLLING INTRANET THROUGH MOBILE

The aim of this project is to control an intranet from a remote place using mobile. This application will send all the client names to the mobile connected to the server & also provides all the processes running in a particular client. In our project work, our assignment was to perform operations like send a message to client, open & close an application, and shut down a client.

M.Tech Project Details:

WEB BASED NETWORK SEARCH ENGINE

The aim of this project is to develop a network based search engine that will allow users to search for a query from any location i.e either local or remote location. If the search is being carried out from a remote location the user needs to send a query via email and in case of a local search user needs to sit in an authenticated LAN. The web application like interface will provide simple & efficient way for searching from network
